Introduction

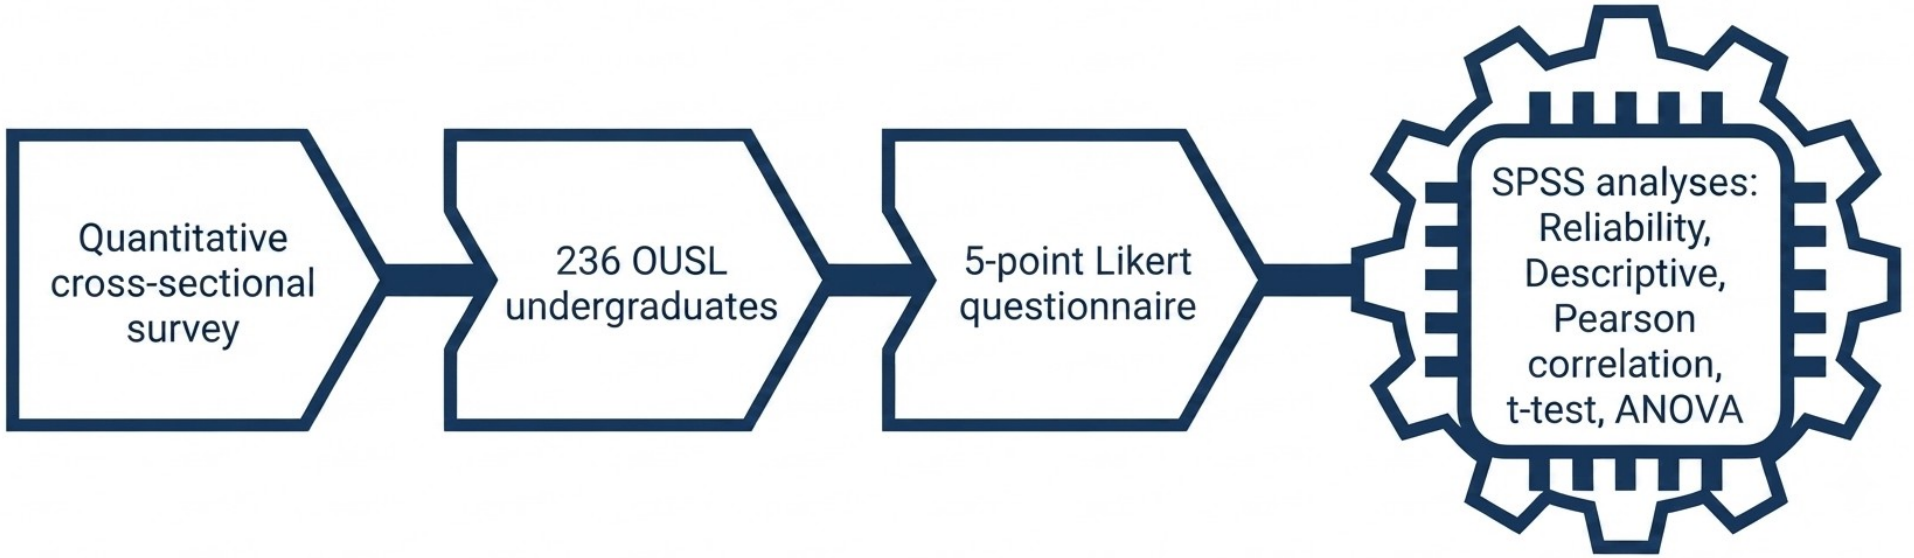

Aim

To investigate behavioural determinants of learner engagement decay in Open and Distance Learning.

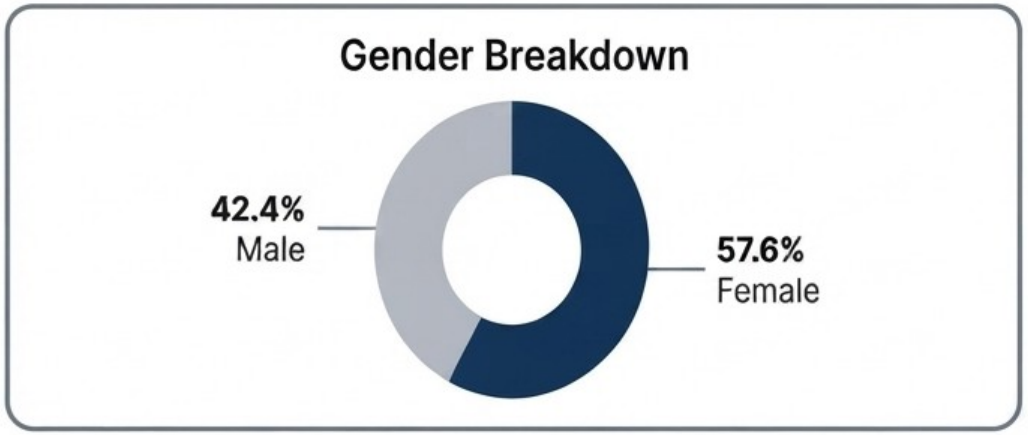

Objectives

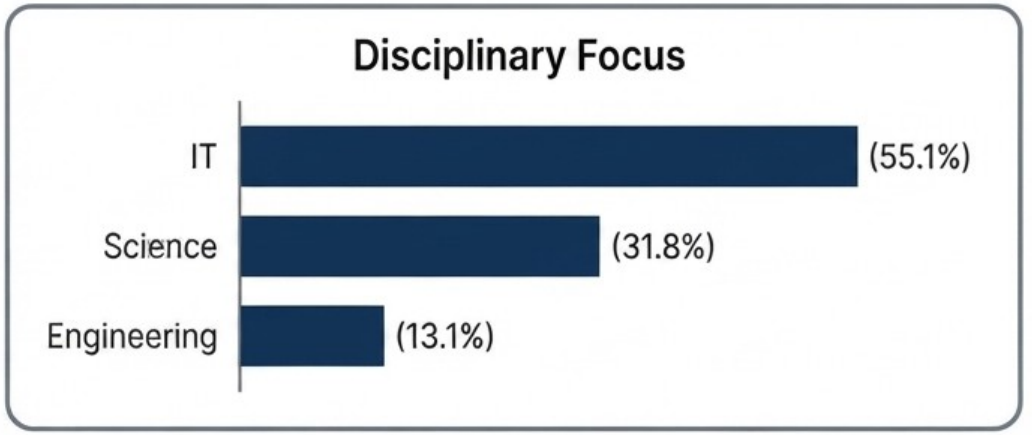

Examine LMS learning behaviour.
Examine notification-driven learning.
Examine social media learning.
Examine self-regulated learning.
Compare differences by gender, programme, employment and study hours.

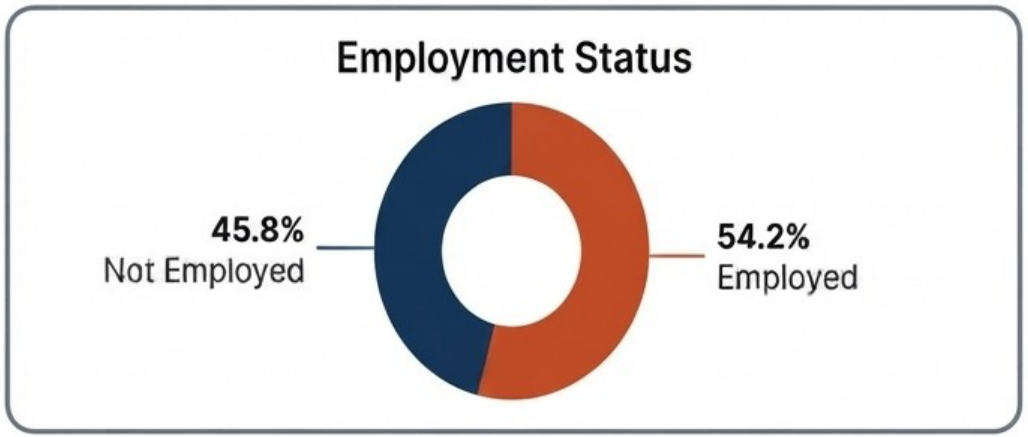

Methodology

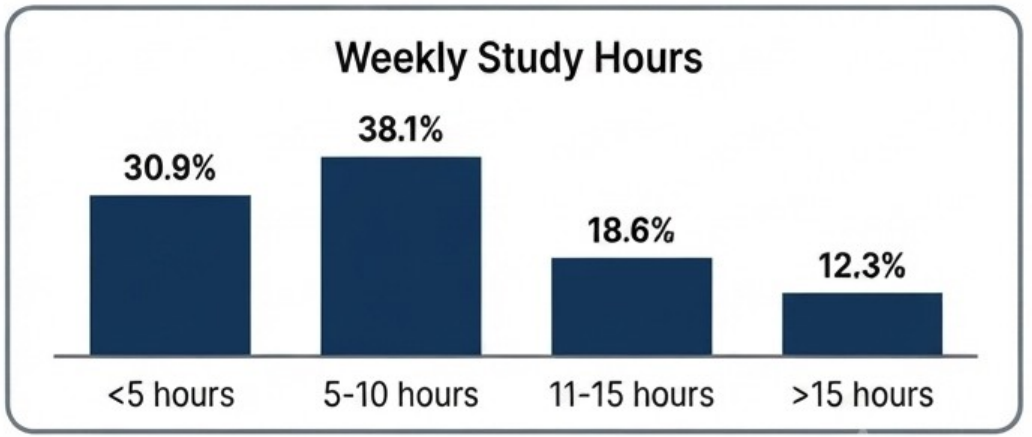

Demographic Profile

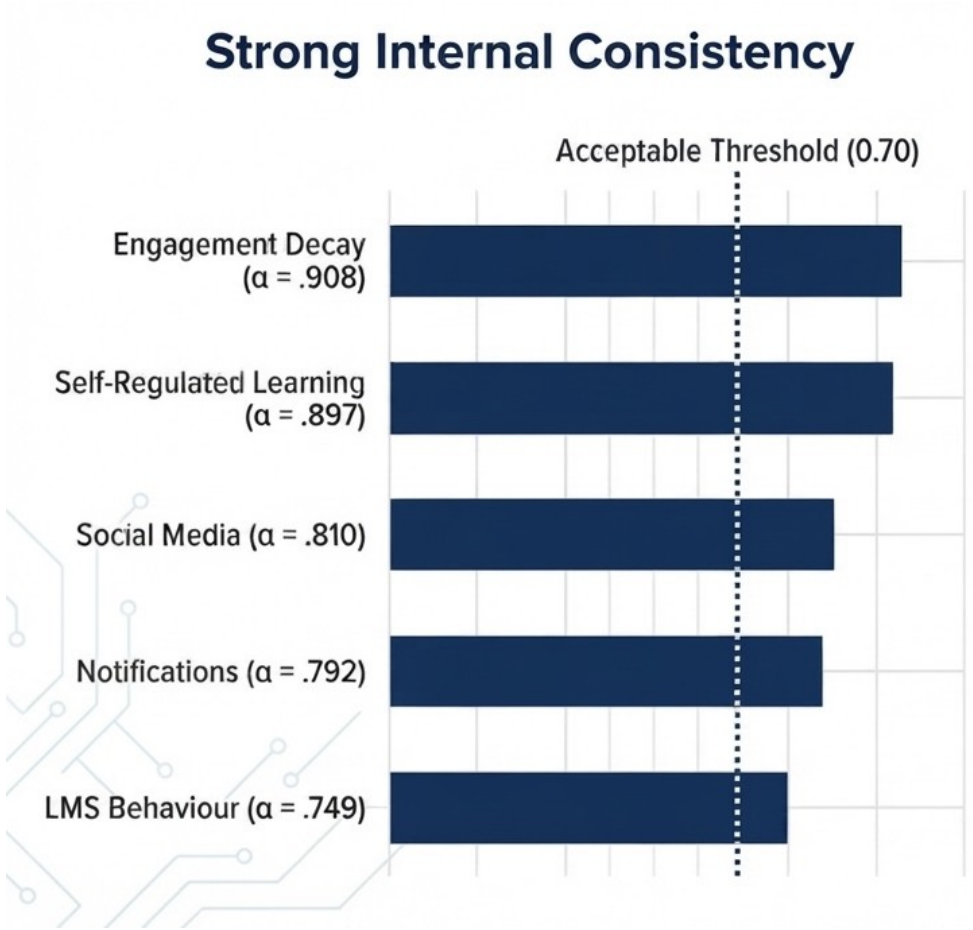

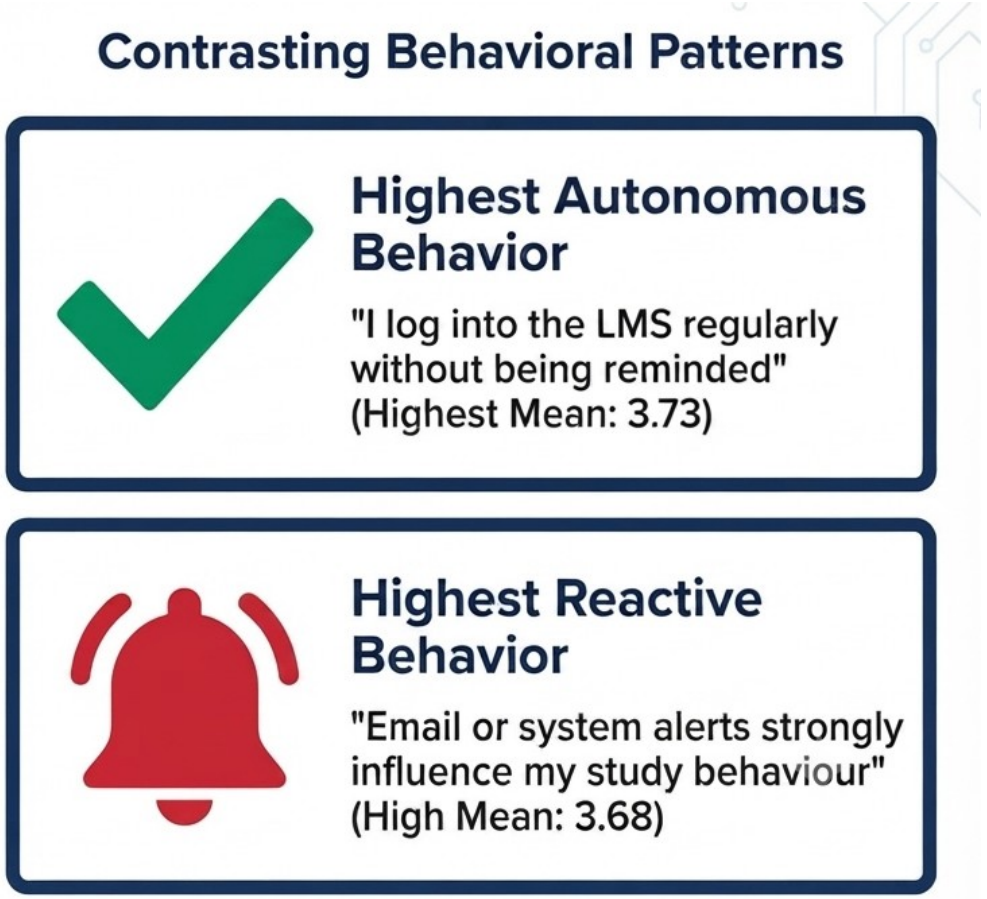

Crucial Insight: Over 50% (54.2%) of the cohort balances their demanding **degree programs with active employment, creating severe external time constraints that impact study consistency.**

Results

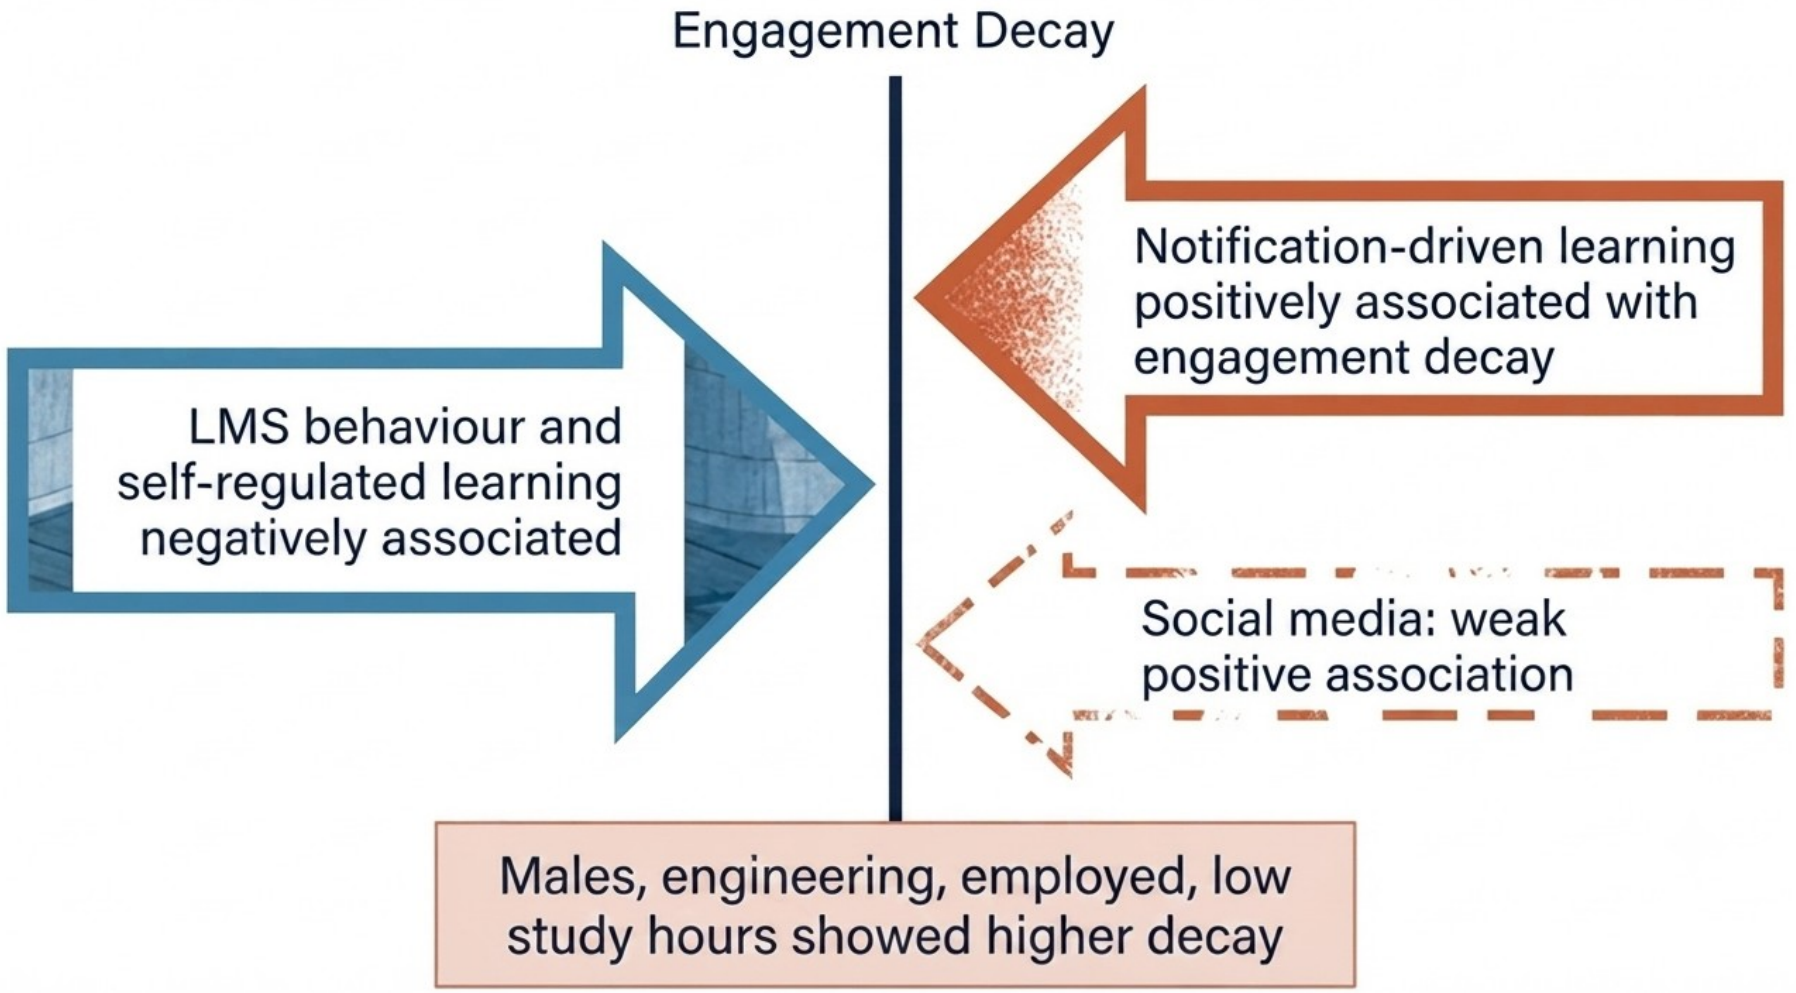

❖ Reliability Analysis Results

❖ Descriptive Statistics Results

Results (Cond…)

Discussion

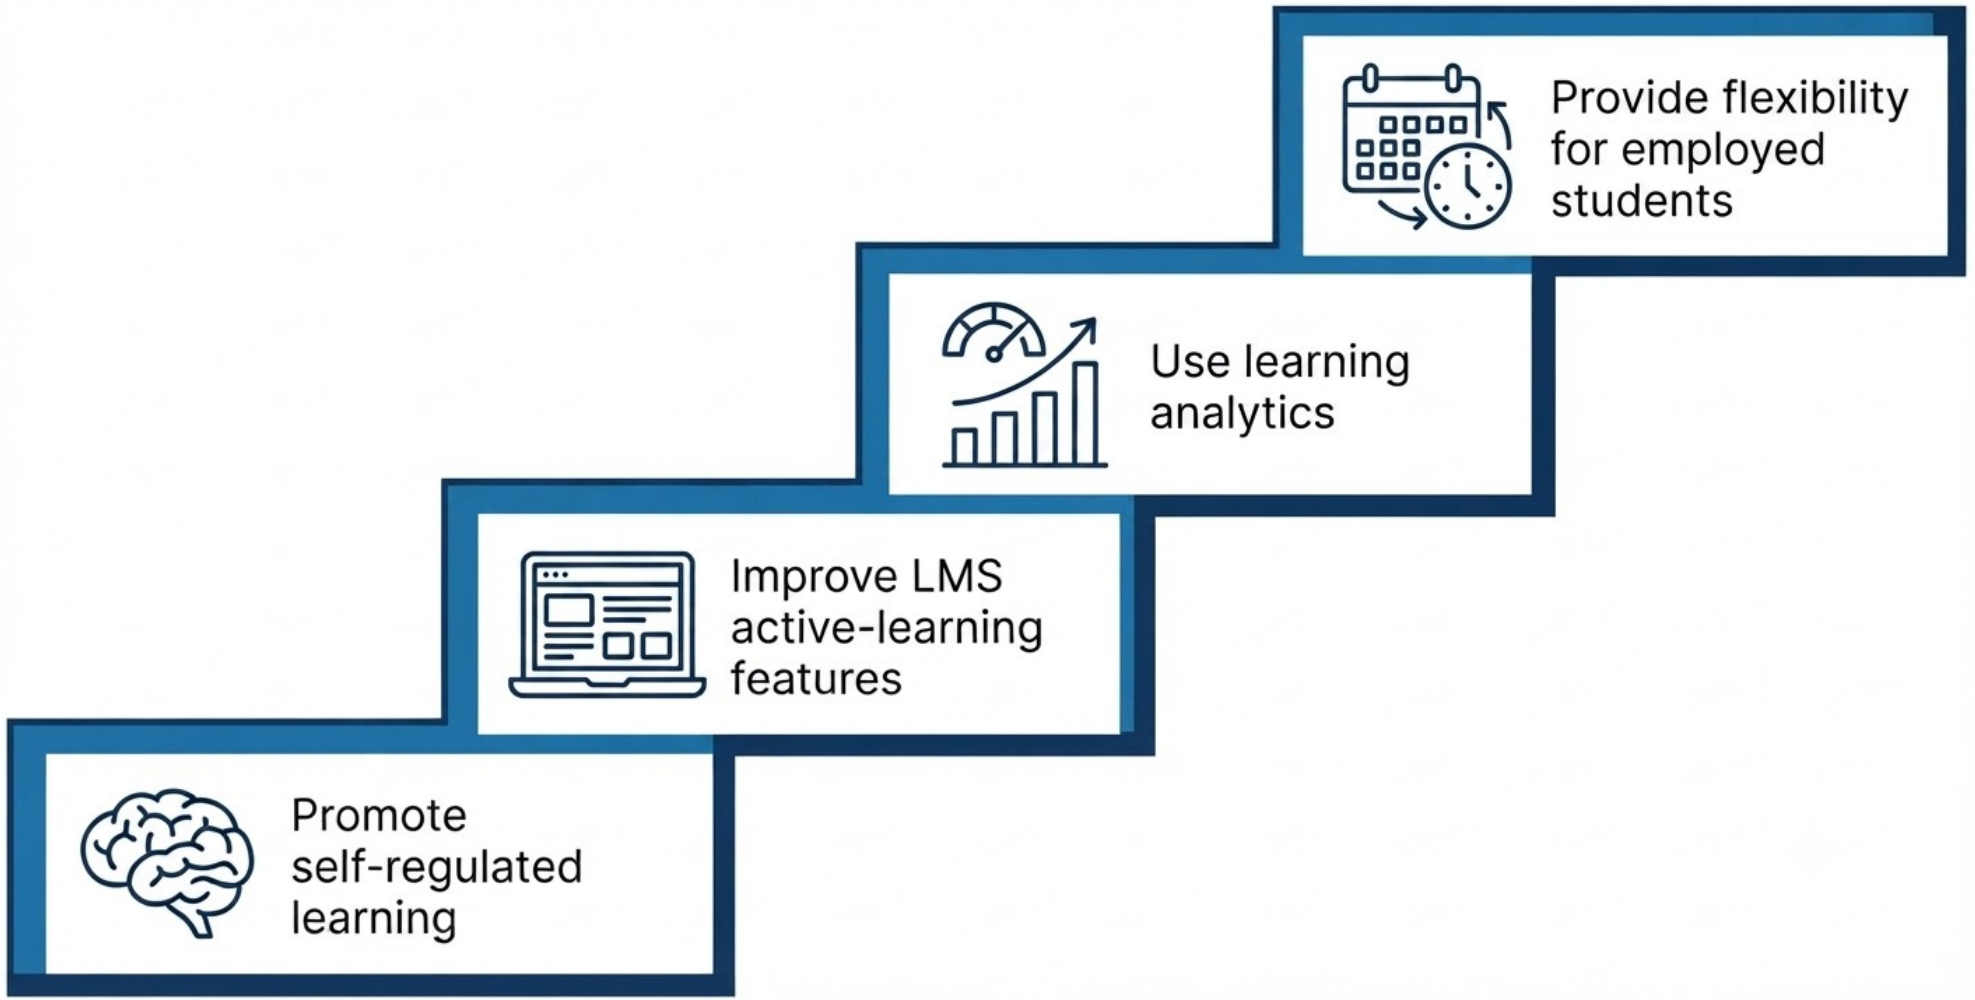

Autonomous learning protects engagement

Dependence on reminders promotes reactive learning

Self-regulation and LMS use should be strengthened

Practical Implications for ODL Institutions

Limitations and Future Recommendations

Longitudinal Design

Cross-sectional design

Single institution

Self-reported responses

Multiple institutes / Generalizability

Conclusion

Digital learning behaviours
significantly influence engagement
Reduce reliance
on notifications
Encourage independent,
self-regulated learners

Thank you!
